

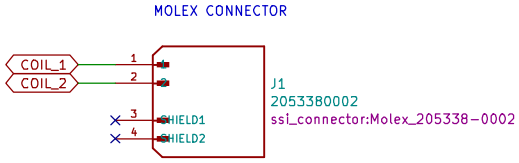
DO NOT flip Coil_1 and Coil_2 here, otherwise things will get messed up.



If Coil_1 (+): Out of Satellite On This Face
If Coil_2 (+): Into Satellite On This Face

This board takes in 8.2V from port 1 & 2 via the Molex connector and runs the current through the embedded coils in the five copper layers.
2 of the identical PCB boards will be soldered together to generate the desired amount of moment.
This schemetics represents only *1* of the boards.

Per PCB board:
max x coil length (mm) = 78
max y coil length (mm) = 78
min x coil length (mm) = 40
min y coil length (mm) = 40
number of turns n = 49
current per board (A) = 0.06
moment generated per board (A·m2)= 0.055848
