V\_FPPT = 19.035. For logic, see SAMWISE  
X panel LT3652 Calculations document  
in Google Drive

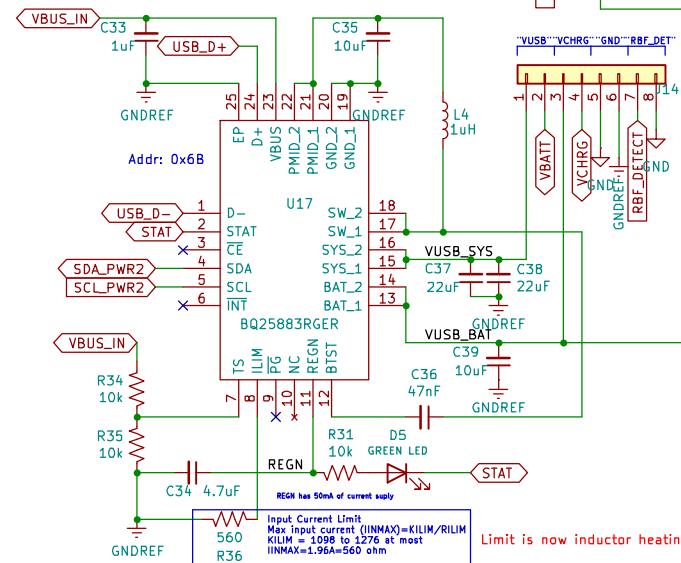

## RBF Jumpers

RBF jumpers features:

- Turn on system:
    - "GND" bypasses ground switch. On J19 short 5 & 6. On J14 short 5 & 6
    - "VCC" bypasses power switch. On J19 short 2 & 3. On J14 short 4 & 5 or (3 & 4 and 5 & 6)
  - "VUSB" enables USB charging. On J19 short 3 & 4. On J14 short 5 & 6
  - "RFB\_DET" tells RP2350 status of RBF connector. On J19 short 1 & 5. On J14 short 1 & 2
- All jumpers should be removed prior to flight

## USB (Boost) Charging for 2-cell Li-Ion

Limit is now inductor heating

NOTE: Components labeled "do not install" (DNI) are not populated by default

Rev: v06c

KiCad E.D.A. 8.0.4

Id: 1/7

## Modular Radio (HopeRF format)

Jumpers for power select:

- Power from 5V LDO (default), short JP6, open JP4, lower power supply noise and power control
- Power from 3.3V switcher, open JP6, short JP4, higher efficiency but always on

Do not short both JP4 and JP6 at the same time  
Leaving both JP4 and JP6 leaves the radio unpowered

NOTE: Components labeled "do not install" (DNI) are not populated by default
